Submitter Comments:

In terms of e-bike and e-e-scooters, There are many weak points in use as transportation in communities: 1 E-bike and e-scooters often share the roads or driveways with cars, Share the sidewalk with pedestrian, leading to collisions or falls which could result in accidents and injuries, bringing significant risk to pedestrians, Especially those in disabilities or children. 2 E-bike and e-scooters are not easy to control at high speeds which more likely causes collisions with cars on the roads. 3. Many low-cost-e-scooters have short lifespans leading to electronic waste that brings harm to environment.
