### Submitter Comments:

1. The state of traffic congestion due to inadequate road infrastructure means that e-bikes, scooters and other forms of transport are the way of the future. 2. The generation that would oppose the use of e-bikes and e-scooters are the very generation that are so spacially unaware and unable to adapt to changes either on footpaths or roadways that they risk the safety of others around them. This same generation are so far removed from current road rules that keeping up to date on road usage by other modes of transport other than cars, means that they threaten the safety of all other road users. 3. I am all for government creating intelligent rule management of e-bikes and e-scooters backed up with sound policing practice around enforcement of the rules. 4. E-bike and e-scooters lanes be integrated in all new roadway development.
