Submitter Comments:

my submission is based on hire scooter safety and facial injury. i ride a private scooter myself ,and when i see people on hire scooters i have noticed that they ride with their feet together ,When you ride with your feet together you easily become unbalanced when you run over any obstacle and topple forward easily, if people ride with one foot forward and one foot back ,this would eliminate a large variety of accidents.to help with this advertising (even a diagram on the scooter) or perhaps just mark the deck of the scooter for preferred feet placement would help immensely with this issue.
