

Sunshine Coast Waterways Authority Bill 2026

Submission No: 026

Submission By: Roger Bayzand

Publication: Making the submission and your name public

It takes too long for the authorities to react when the shoaling happens at the river mouth, sometimes it is months between it happening and dredging beginning . We are at that point right now 13/03/2026, a survey was done some weeks ago and we are still waiting for the dredge to come on station, in the time between the survey and now we have had a period of strong winds and the bar is breaking right now. Until a long term fix has been established please keep the dredge on station so it can react quickly.
