Subject: Objection to the proposed new Vegetation law

Dear Sir,

I wish to express my **strong opposition to the new proposed Vegetation laws** coming before parliament. They are so out of touch with how these laws will effect productivity and overall management of grazing country in the south west.

Fodder harvesting and thinning which are a normal and positive management tool for graziers in times of drought, are being made a political football. The system works well now, why would you want to bog it down in red tape and Govt. control.

Please lodge my objection.

Don Dunsdon
