

SDNRAIDC Committee

Dear Committee,

We live in a very dry corner of Queensland and ten year droughts are not uncommon. Mulga Fodder is how our Cattle and Sheep

survive. We have managed feeding our stock on our Property for generations. Our land is our lively hood and we never abuse it.

Take away our drought feeding you take away our income our employment in the bush and our businesses in the towns.

Mulga feeding is not clearing land.

Why are you trying to fix something that *is not broken?*

Peirce and Delrdre Edwards.
