Are trees really going to save the Barrier Reef.

Earth dams. When we have a by-wash problems I get a by-wash expert out and the first thing they is get rid of trees that are in the area. Put a wide and gentle slope they try and get grass on the by-wash as soon as possible to hold the earth.

We seem to have this thing trees are solely going to fix the earth problems.

Fact a clump of trees dose cause erosion. As their is no grasses growing under Neath them.

Having grass is it really a bad thing.

Fact trees and grass actual need each other. Trees and Grasses needs sunlight
