Subject: Vegetation Management Bill 2018

From:
Dr. F. H. Talbot AM, FRZS

Queensland at present is rapidly destroying its vegetative cover. This sets a shocking example to Australia, but also adds to global warming.

Please pass this bill, which goes some way to redressing the rate of damage, and sets some parameters to save greater loss of biodiversity.

As a biologist and professional environmentalist I strongly support this bill. It is important for Queensland's long term biological health.

Sincerely,

Frank Talbot.
