

## SUBMISSION

I provide my submission on rejection of the changes proposed in the Vegetation Management (Reinstatement) and Other Legislation Amendment Bill 2018 ("the Bill").

This constant change in legislation severely impacts on the ability of farm managers to plan and implement effective long-term property and business management decisions. Biological processes work in much longer timeframes and can be severely compromised when mismatching regulations are enforced. Farmers have long called for certainty with the vegetation management regulatory framework. I am totally opposed to continued uncertainty and attacks on the viability of myself, the long-term sustainability of my business as well as attacks on fellow farmers.

The impacts of the proposed changes to the Vegetation Management Act include:

- The purpose for High Value Agriculture and Irrigated High Value Agriculture will be removed.
- Extends Category B (annual/renewal vegetation) and Category C (regrowth vegetation) to freehold land, and Indigenous freehold land, additional B62 000ha High Value Regrowth and water course buffers to all reef catchment, Burnett Mary, Fitzroy, Eastern Cape York.
- Trapping will require Development Application to be lodged for approval.
- The purpose for High Value Agriculture and Irrigated High Value Agriculture will be removed.

Describe the impacts the changes will make to small agriculture, discourage investment, and increase costs and time to manage vegetation.

We do not move High Value Agricultural or Irrigated high value land but do wish to be self assessable without hassle when it comes to clearing fence lines, roadway and controlling lantana on creek + river flats. We do have to clear some timber to maintain these areas but have great respect for the environment
