Submission on Vegetation Management and Other Legislative Changes.

Dear Committee

I plead with you to encourage the Queensland Government to abide by their election promise to drive down excessive clearing rates and to introduce legislation to protect remnant and high conservation value regrowth revegetation. It is imperative to bring a stop to the wholesale land clearing that is going on under the present regulations. Owners of these lands are going full pelt at clear felling and bringing our native fauna and flora to endangered levels in anticipation of your changing the rules. Please ACT NOW and stop the massacre. We are destroying all our natural systems and habitats that are essential for our future, your future, everyone's future. The damage and pollutants to the reef and all our natural habitats must be stopped NOW. Do not compromise on our heritage and future, please work out a solution, help the farmers but save our wildlife and their habitat. Our environment should be a priority without it we are nothing

Sincerely

Robyn Cox
