Figure 1 This photo shows a stock route camping reserve that we rent that has never had its mulga managed. Note the poor leaf cover and lack of under canopy cover on the ground apart from leaf mulch.

Figure 2 This photo shows the land immediately adjacent to the figure 1 photo that shows the growth in an area that has been managed for fodder. Note the leaf cover in this area.
Figure 3 Typical land type "Woodlands", Wyandra, showing thickening mulga

Figure 4 Typical vegetation on "Woodlands", Wyandra, showing thickening mulga
