Angela Parker

State Development and Regional Industries Committee

Dear Parliamentary Committee,

**Submission on proposed amendments to the *Animal Care and Protection Act 2001***

Thank you for the opportunity to make a submission on the proposed amendments.

My name is Angela Parker. I have been studying to be a dog trainer and have helped to rehabilitate a few dogs with reactivity issues, including my own. We participate in a sport that is reasonably new to Australia called GRC. This is an acronym for Gameness, Relationship and Control and was developed to help all breeds, but particularly bull breeds, to live enriched and happy lives.

I would like to raise concerns over the proposed amendments to the *Animal Care and Protection Act 2001*.

1. The government has not followed its own best practice guide for the amendment of legislation. As a result, key stakeholders and the wider community have not been afforded the opportunity to be consulted on the proposed amendments to the Act.
2. Lack of community consultation means the impacts on the community have not been adequately assessed.
3. Conclusions drawn regarding restraint-based tools, specifically the prong collar, have been made based on unsubstantiated research and without consultation of key stakeholders

POINT 1

a) The government has not followed its own best practice guide for the amendment of legislation. As a result, key stakeholders and the wider community have not been afforded the opportunity to be consulted on the proposed amendments to the Act.

The Queensland Government Guide to Better Regulation May 2019 states that:

- The COAG Best Practice Principles For Regulation Making include:
  - a) Consulting effectively with affected stakeholders at all stages of the regulatory cycle
  - b) Ensuring that government action is effective and proportional to the issue being addressed
  - c) Considering a range of feasible policy options including self-regulatory, co-regulatory and nonregulatory approach
  - d) Adopting the option that generates the greatest net benefit for the community

Evidence that the government has not followed its own best practice guidelines:

I refer to the “REVIEW OF THE ANIMAL CARE AND PROTECTION ACT 2001 CONSULTATION OUTCOMES REPORT”, prepared by the Department of Agriculture and Fisheries and published in October 2021.

I refer to page 37 of the report, section titled “Relevant E-Petitions”. It is acknowledged that “there were six animal welfare related e-petitions that were tabled in the Legislative Assembly during the consultation period. Issues raised in these e-petitions (listed below) are also being considered as part of the ACPA review process”.

Of these six petitions, the relevant subject matter of three of these petitions was also included as part of the initial discussion paper; as such, stakeholders and the community were provided the opportunity to give feedback on these matters. I have included the 3 relevant petitions below:

- Make suitable shelter mandatory for all farmed animals (Petition no. 3499-21)
- Tethering of dogs must be prohibited (Petition no. 3501-21)
- Continue the use of all methods, including dogs, to control feral pigs (Petition no. 3515-21)

There remains three relevant e-petitions, for which there was no correlating subject matter in the initial discussion paper:

- Ban the use of shock collars on dogs (Petition no. 3526-21)
- Illegal to import - Prohibit the use of prong collars in Queensland (Petition no. 3530- 21)
- Prohibit the use of choke collars in Queensland (Petition no. 3531-21)

These three petitions were made to the Hon. Mark Furner, with closing dates in May 2021 and a response due date in June 2021. I wish to note that, since the closing of these petitions, there has been no opportunity provided to relevant stakeholders or the community to be surveyed on these matters. All three petitions listed above closed on 23rd May 2021. The closing date for feedback on the review of the Animal Protection and Care Act (2001), as detailed in the Outcomes Report, was 21st May 2021.

With reference to the “Animal Care and Protection Amendment Bill 2022 Explanatory Notes”, page 33, section titled “Consultation”. The use of prong collars or any other restraint-based tools is in fact missing from the key consultation outcomes of the discussion paper.

It is of concern to me that the following has been stated in the bill (I refer to page 18), given adequate community consultation has not been completed:

“New section 37A allows for the possession of additional types of collars or devices to be prescribed. The amendment is required because continuous developments in collars and devices for animals means that some existing and new collars and devices become unacceptable to the community”

## POINT 2

a) Lack of genuine community consultation means the impacts on the community have not been adequately assessed.

The “Queensland Government Guide to Better Regulation May 2019” states that “The depth of analysis and consultation undertaken for a proposal should be proportional to the complexity and significance of the problem and the size of the potential impacts”.

To quote from page 14 of the bill: “New section 37A prohibits the possession of a prong collar or another restraint device prescribed by regulation, unless the person has a reasonable excuse”

The proposed banning of restraint-based training tools presents a number of adverse impacts on the community, which have not been considered due to insufficient community consultation (as evidenced above). To quote from The Queensland Government Guide to Better Regulation May 2019, these include:

### **Business Impacts**

I do not yet have a dog training business however I have experienced firsthand the effects of using a variety of methodologies and tools on my own dog, (who is a rescue dog) and who I have had the chance to use the prong collar with great effect and to no detriment. I obtained appropriate ongoing training with a very experienced trainer. He no longer requires the use of the prong in day to day life. It is not a tool that is worn all the time.

My dream is to enter the realm of rehabilitation of reactive and nervous dogs, specifically with rescue dogs. The ability to use a variety of methods and tools is imperative with these dogs as purely positive trainer rarely works by itself. Many very loved dogs will end up euthanised if their behaviour cannot be modified.

### **Competition Impacts**

We participate in a sport that is reasonably new to Australia called GRC. This is an acronym for Gameness, Relationship and Control and was developed to help all breeds, but particularly bull breeds, to live enriched and happy lives.

If I was not able to use a variety of tools then we would not be able to fine tune positions and behaviours as succinctly as we could with tools.

### **Social and environmental impacts**

Many dogs, and family dogs, are perfectly relaxed and calm in the home environment however that could change in the public sphere as they may be nervous and reactive, and tools used in the correct and humane manner are invaluable to communication with the dog. This means a poorer quality of life for this dog and potential frustration that could flow over into the home life as reactivity there – leading to a poor outcome.

Many dogs will become unmanageable and there will be even higher rates of euthanasia will rise when there was simple potential to rehabilitate these animals and save many people a lot of heartache.

It is my understanding that both the Police and Armed Forces use a variety of tools, including prong collars, in training their animals so the impact on that will be significant.

POINT 3 -

MODIFY TO SUIT YOUR OWN POSITION ON RESTRAINT BASED TOOLS (ie. you may wish to remove the prong collar section)

c) Conclusions drawn regarding restraint based tools, specifically the prong collar, have been made based on unsubstantiated research and without meaningful consultation of key stakeholders.

I refer to page 25 of the bill, which states:

“Imposing restrictions on the use of prong collars and other devices is justified as they are considered to be inappropriate as a training aid because they cause pain and fear in dogs which is used as a punishment. Research has shown that using aversive training methods including the use of prong collars can cause pain and distress and can compromise the dog’s welfare”

I would request a more comprehensive review of tools be considered prior to drawing such conclusions, as the above statement demonstrates a lack of understanding of behavioural science and the means in which training tools are most commonly used as a means of Negative Reinforcement (guiding the dog towards the correct behaviour), not Punishment. Adequate consultation with key stakeholders, including but not limited to:

- Members of the Queensland Government currently utilising these training tools, including Police and Military units
- Certified Animal Training Professionals, working to improve standards of pet ownership and care, community safety and education around responsible pet training and ownership
- Animal Welfare Organisations
- Members of the public who own pets or have pet dogs living in their community

Would generate a more comprehensive understanding of the use of training tools in behavioural modification and the betterment of animal welfare.

I refer to page 3 of the bill, which states:

Prohibiting inhumane practices

The Bill amends the ACPA and introduces new offences which will prohibit the inhumane practice of:

- possessing or using a prong collar, which is designed to bruise or pierce an animal’s skin, or another prescribed restraint on an animal

The above statement is factually incorrect – the tool is not designed to bruise or pierce an animal’s skin. I refer further to page 25 of the bill, which states:

If used incorrectly, prong collars can also cause physical injuries, such as bruising, scratching, and punctures to the skin of the dog. Over time, this can lead to scar tissue developing on the dog. In extreme but rare cases, prong collars have been associated with spinal cord injuries and other severe injuries.

This refers specifically to the incorrect use of the prong collar. It is reasonable to state that incorrect use of any tool (for example a leash, flat collar or harness) has the potential to cause injury. It is also reasonable to state that correct use of the prong collar does not cause injury to the dog. I have had more issues with a flat collar and my dog pulling into that than any issues with the prong collar.

Additionally, it is of great concern to me that, as per the wording of the bill above, the use of potentially any and all restraint-based tools is considered to be inhumane. I am especially concerned by this wording given key stakeholders and members of the community have not been given room to provide feedback on this.

My understanding is that an individual can currently be convicted of animal cruelty for the misuse of any training tool. I would request that current and historical data on such convictions be cited and included in the consideration of amendments to regulation.

Based on the above, I would request that amendments to the use / availability / legality of tools not be considered as part of the proposed amendments to the Act, until such time as best practice process is followed, and the community is consulted on the proposed changes.

Additionally, I would like to propose that the government tackle animal cruelty at the source and not ban tools that are useful to people with education and training with them. What should be brought to legislation is the issues of puppy and cat farming – these practices along with back yard breeding should be banned.

Consequences for actual animal cruelty should be strengthened, not banning of tools that properly trained professionals can use to help dogs.

Yours sincerely

A handwritten signature in black ink, appearing to read 'AP', with a large, stylized flourish extending to the right.
