Submitter Comments:

Hi, As a small business owner, We have invested heavily in this new venture recently. With sales drop of 15-20% due to the recent economic slowdown, an increase in the freight cost is not sustainable. Currently, freight cost is about 8-10% of the total cost of one pallets. For a small business like us, If this cost goes up, it is hard to survive as we depend on this weekly delivery from MetCash to stock out items. This will aslo lead to increase into the selling price of the items and potentially loose customer. Thanks for looking into it. Please feel free to reach out if you need to discuss this further.
