Inquiry into Vehicle Safety, Standards and Technology, including Engine Immobiliser Technology

Committee Secretary

Transport and Resources Committee

Parliament House

George Street

Brisbane Qld 4000

Dear Transport and Resources Committee,

I welcome your enquiry on vehicle safety, standards and technology, including engine immobiliser technology.

During trials of our Pixie Radio Break In technology within Victoria and Queensland, merit was identified in Police being able to override car radios and speak in live time to suspected offenders. This same patented and proven technology could also be used to override throttles on vehicles. The throttle immobiliser could be enacted from Police vehicles or remotely by Police Controllers.

The advantage of using this technology is

- Can be retrofitted to existing vehicles
- Low cost affordable solution
- Shovel ready

A feasibility study in the first instance would determine the effectiveness of this proposal. I would be extremely interested in involvement into any such consideration.

Pat Latter
