

Question on Notice

No. 224

Asked on 22 February 2007

Mr WELLINGTON asked the Deputy Premier, Treasurer and Minister for Infrastructure (Ms BLIGH) –

QUESTION:

With reference to the proposed Traveston Dam—

If the dam is constructed to stage one height or stage two height level, will she release a map showing the location of the possible maximum flood level height on affected land if the dam is constructed to the above levels?

ANSWER:

A map detailing the full supply level and its height on affected land for both Stage 1 and Stage 2 is available on Queensland Water Infrastructure's website at www.qwi.com.au. The map was distributed to all affected landholders in an Information Pack in October 2006.

A further description of the potential changes to flooding regimes as a result of the proposed project will be addressed within the project's Environmental Impact Statement.
